ANALYTICS

Hospital swing-bed programs provide an integral service to their communities, but this indispensable category of patient care is under siege by payors and policymakers. Our innovative tool is the only solution dedicated to rural and community hospital swing-bed programs and is the national platform for data collection and benchmarking swing-bed outcomes measures.

Developed in partnership with leading national rural quality researchers and more than 100 hospitals that participate in a national field-test pilot, this groundbreaking tool provides instantaneous multiple-hospital benchmarking. Elements include:

- Delivers new value-based information that can be leveraged in contract negotiation with commercial payors and Medicaid Managed Care Organizations
- Integrates sections of CMS Minimum Data Set (MDS) to enable reliable benchmarking between organizations reimbursed on PPS v. cost basis
- Mirrors the workflow of the swing bed patient care process, including data collection for admission, risk adjustment, self-care, mobility, discharge and readmission
- Provides the opportunity to contribute to the first dedicated database developed specifically for swing beds, thereby advancing the rural and small hospital agenda with CMS and policy makers

The screenshot shows a web application interface for 'Swing Beds Data Actions'. It includes a 'Unique Identifier' input field and a 'Create Record' button. Below this is a 'Swing Beds Records' table with columns for Unique ID, DOB, Admission, Discharge, Primary Payer, and % Completed. The table contains 10 rows of data. At the bottom of the table, it says 'Showing 1 to 10 of 22 entries' and has navigation buttons for 'Previous', '1', '2', '3', and 'Next'.
